

Double Drum Road Roller

This double drum road roller is designed for soil and asphalt compaction in construction projects. It features dual smooth drums for efficient compaction and a comfortable operator cabin.

Overview

Professional Compaction Solution

The JD135 is a high-performance double-drum roller engineered for efficient soil and asphalt compaction in demanding construction environments. Featuring a robust frame and dual smooth drums, it delivers consistent results for road construction, parking lots, and large-scale infrastructure projects. The inclusion of a hydrostatic drive and a dedicated water spray system ensures operational precision and prevents material adhesion, making it a reliable choice for professional contractors.

Key Features

Operational Systems

- Dual smooth drum configuration
- Integrated water spray system
- Hydrostatic transmission

Safety & Compliance

ROPS, Clear Operator View, Hydrostatic Drive

Application

Primary Applications

Road Construction • Parking Lots • Soil Compaction • Asphalt Compaction
