

Double Flanged Pipe Reducer

The double flanged pipe reducer connects pipes of different diameters. Its conical design ensures a gradual transition with flanged ends for secure bolting.

Product Overview

Double Flanged Taper

The Double Flanged Taper is a precision-engineered pipe fitting designed to connect two pipes of different diameters. Featuring a conical transition section, it allows for smooth flow regulation while maintaining a secure, leak-proof connection via bolted flanges on both ends. This component is essential for managing flow rates and pressure transitions in industrial piping systems.

Technical Standards

Compliance Standards	BS4772, EN545, ISO2531
