

Double-Glass Frameless Bifacial Solar Module

This double-glass solar module is PID resistant and ensures low power attenuation. Its frameless design promotes drainage, snow removal, and dust removal, while its transparency facilitates bifacial power generation.

Product Overview

Double-Glass Frameless Bifacial Solar Module

This high-performance double-glass solar module is engineered for efficient energy conversion and long-term reliability. Featuring a frameless bifacial design, it excels in diverse environments, from large-scale power stations to specialized BIPV applications. With a 30-year linear power warranty, it offers robust resistance to PID, micro-cracks, salt fog, and harsh weather conditions, ensuring stable operation and high power output.

Key Features

Technical Highlights

Bifacial Power Generation • Frameless Design • 1500V System Voltage • Low Power Attenuation

Durability & Resistance

PID Resistant, Salt Fog Resistant, Waterproof, High Fire Rating, Micro-crack Resistant

Performance

Linear Power Warranty

30 years

Applications

Power Station Applications

- Conventional Areas
- Snow Areas
- Desert Areas
- Coastal/Island Regions
- Reservoirs
- Ponds

BIPV & Structural Applications

- Flat & Sloping Roofs
- Carport Shading
- Greenhouses
- Livestock & Poultry Breeding Facilities
- Sound Barriers
- Highway Infrastructure
