

Double Head Coil Decoiler 300kg Capacity

This double head coil decoiler is designed for unwinding coil material in industrial applications. Its dual-head configuration allows for continuous operation by switching between coils.

Product Overview

High-Efficiency Double Head Coil Decoiler

The 300kg capacity double head decoiler is engineered to optimize industrial production cycles by enabling continuous material feeding. By allowing operators to switch between coils seamlessly, it significantly reduces downtime and enhances overall factory productivity. This robust machine is compatible with straightening equipment and is ideal for fast-punching applications, including the production of stators and rotors.

Performance Metrics

Maximum Coil Weight

300 kg

Max Coil Weight Capacity

Key Features

Standard Features

- Double head configuration for continuous operation
- Compatibility with straightening machines
- Left and right shifting available for narrow materials
- Heavy-duty steel construction
- Manual tension control system

Configuration Options

Available Upgrades

Motorized drive, Electronic control system, Adjustable narrow material shifter

Applications

Primary Applications

Fast Punching • Stator Production • Rotor Production • ET Sheet Processing
