Product Overview

Professional Ventilation Solution

This double-layer aluminum exhaust ducting is engineered for high-performance kitchen ventilation and air conditioning systems. Featuring a flexible, durable construction with a reinforced carbon steel spring wire, it offers excellent maneuverability for installation in confined spaces. The design is both fire-resistant and cost-effective, ensuring reliable airflow management while maintaining safety standards in demanding culinary environments.

Technical Specifications

Operating Temperature

-30 °C
Min Temp

150 °C
Max Temp

Maximum Pressure	3000 Pa
Material Thickness	0.032 - 0.07 mm

Construction Details

Spring Wire Diameter	0.9 - 1.3 mm
Construction	Double Layer, Flexible, Corrugated, Fire Resistant

Applications

Primary Applications

- Range Hoods
- Air Conditioning Systems
- General Kitchen Ventilation
