

# Double Layer Metal Sheet Forming Machine

This double-layer metal forming machine is designed for producing metal sheets with different profiles in a single pass. It is suitable for manufacturing roofing sheets, wall panels, and other metal building components.

## ADDITIONAL IMAGES

## Product Overview

### Double Layer Metal Sheet Forming Machine

This industrial-grade double-layer machine is designed for high-efficiency production of metal roofing sheets and wall panels. It features a robust rolling mill structure with precision rollers and guides to ensure accurate profiles in every pass. Equipped with a hydraulic cutting system and a PLC control unit, it offers automated operation for professional manufacturing environments.

## Technical Capabilities

### Key Features

- Double-layer design for two profiles in one machine
- Precision rollers for accurate shaping
- Hydraulic cutting system
- PLC automated control system
- Robust rolling mill construction

### Performance Metrics

**1 Year**

Warranty Period

Machine Type	1000-900 Double Layer Forming Machine
Forming Process	Cold Roll Forming

## Applications

Suitable Applications	Roofing Sheets, Wall Panels, Industrial Workshops, Warehouses, High-rise Construction
-----------------------	---

## System Components

### Hydraulic System

- Green fluid reservoir
- Electric motor drive
- Integrated pressure gauge

### Safety Features

Hazard Markings • Adjustable Components • Emergency Stop Integration

## Service & Support

### Service Options

- Customized sourcing services available
- Negotiable warranty terms
- International export support

### Quality Certifications

SGS, Alibaba.com Assessed
