

Double Row Automotive Ball Bearing

This high-performance double row ball bearing is designed for automotive applications. It offers exceptional load capacity and durability, ensuring smooth and reliable operation.

Product Overview

High-Performance Automotive Bearing

This double row ball bearing is precision-engineered for demanding automotive applications. Designed for exceptional load capacity and durability, it ensures smooth operation even under significant stress. Its high-quality construction minimizes friction, contributing to an extended service life and reliable performance in various automotive key parts and aftermarket service scenarios.

Technical Specifications

Bearing Type	Double Row Ball Bearing
Suitable Applications	Automotive, Aftermarket Service, High-Load Environments

Performance Features

Key Performance Metrics

2 rows
Row Count

Operational Benefits

- Exceptional load capacity
- Reduced friction operation
- Extended service life
- High-quality material construction
