

Double Row Wood Boring Machine

This machine is a double row multi-boring machine designed for efficient and accurate drilling in woodworking applications. It features multiple drill bits arranged in two rows, allowing for simultaneous drilling of multiple holes, significantly increasing productivity.

Overview

High-Efficiency Double-Row Boring

This double-row multi-boring machine is engineered for high-precision drilling in professional woodworking applications. Its robust construction ensures stability and durability for consistent, high-volume performance in furniture component manufacturing. By utilizing two rows of drill bits simultaneously, the machine significantly enhances productivity and reduces processing time, making it an essential tool for efficient wood fabrication.

Technical Specifications

Model Series	MZ7221 A Series
Drilling Configuration	Double Row
Primary Application	Woodworking, Furniture Manufacturing, Mass Production

Features

Operational Features

- Simultaneous multi-hole drilling
- User-friendly control panel
- Precision drilling mechanism
- Integrated operator safety features

Build Quality

Robust Construction • High Precision • Industrial Grade
