

Double Start Rock Auger for Drilling

This rock auger features a double start helix for efficient material removal. Its durable construction and hardened cutting teeth ensure reliable performance and precise drilling in construction, mining, and geotechnical applications.

Product Overview

Double Start Rock Auger

The Double Start Rock Auger is a robust and efficient drilling tool engineered for challenging rock formations. Its specialized double start helix design ensures rapid and effective material removal during operation. With customizable cutting teeth and blade configurations, it can be tailored to meet specific construction site requirements, providing reliable performance in diverse geological conditions.

Technical Specifications

Auger Connection Type	Taper or Standard
Customization Options	Selectable Cutting Tooth, Selectable Blade

Application

Suitable Stratum

- Hard rock
- Gravel
- Intense to weakly weathered rock
- Hard permafrost

Primary Industries

Construction • Mining • Geotechnical Engineering
