

Double Start Standard Earth Auger

This robust drilling tool is designed for efficient soil and rock penetration. Featuring a double start helix design, this auger ensures rapid material removal and increased drilling speed.

Product Overview

High-Performance Drilling Solution

The Double Start Standard Earth Auger is a robust drilling tool engineered for efficient soil and rock penetration. Featuring a double start helix design, this tool ensures rapid material removal and increased drilling speeds. It is built for longevity and reliability in demanding construction environments, making it an essential asset for foundation work, piling, and geological exploration.

Technical Features

Customizable Components

- Cutting tooth
- Blade

Auger Configuration

Taper, Standard

Operational Capability

Compatible Stratum

Hand rock • Gravel • Intense to weakly weathered • Hard permafrost
