

Double Suction Split Case Centrifugal Pump

This high-capacity, split-case centrifugal pump is engineered for industrial and municipal applications. Its double-suction impeller delivers high flow rates and low NPSH requirements.

Product Overview

High-Capacity Double Suction Performance

The SH S SA series is a high-performance double suction, split-case centrifugal pump engineered for demanding industrial and municipal fluid handling. Featuring a split-case design, this unit allows for streamlined maintenance and inspection without the need to disturb existing pipework. It is optimized for efficient transfer of clean water and low-viscosity fluids in high-demand environments.

Key Features

Engineering Highlights

- Double-suction impeller design
- Split-case casing for easy maintenance
- Low NPSH requirements
- Robust material construction for reliability

Applications

Typical Applications

Water Supply, Irrigation, Fire Protection, Industrial Process

Performance

Fluid Compatibility

Clean Water • Low-viscosity fluids
