

Double Tank Solar Water Heater

This high-efficiency solar water heater features a double-tank design for enhanced heat retention and performance. It utilizes evacuated tube collectors for optimal solar energy absorption.

Overview

High-Efficiency Double-Tank Solar Water Heater

This high-efficiency solar water heater features a specialized double-tank design engineered for enhanced heat retention and superior thermal performance. Utilizing advanced evacuated tube collectors, it ensures optimal solar energy absorption even in varying weather conditions. It is a robust, sustainable, and cost-effective hot water solution suitable for both residential and commercial applications.

Technical Features

Design Type	Double-Tank
Collector Technology	Evacuated Tube

Applications

Suitable Applications	Residential, Commercial
-----------------------	-------------------------

Performance & Reliability

Reliability Features

- Enhanced heat retention
- Durable construction
- Minimal maintenance requirements
