

Double Type B Sprocket

This is a double Type B sprocket used for power transmission applications. It features precision-machined teeth for optimal chain engagement and reliable performance.

Product Overview

Precision-Engineered Double Sprocket

This D40B11 double Type B sprocket is designed for efficient power transmission in demanding industrial environments. Featuring robust construction and accurately machined teeth, it ensures optimal chain engagement and reliable performance. The hardened surface provides extended wear resistance, making it an ideal choice for conveyor systems and various mechanical power transmission setups.

Technical Specifications

Model Number	D40B11
Sprocket Type	Double Type B
Key Features	Hardened Surface, Precision Machined, Double Row, Industrial Grade

Applications

Typical Applications

- Industrial Machinery
- Conveyor Systems
- Mechanical Power Transmission
