

Double Type B Sprocket

This is a double type B sprocket designed for power transmission applications. The sprocket features a durable construction for reliable performance in industrial environments.

Product Overview

Precision-Engineered Double Type B Sprocket

This D40B14 double-type B sprocket is designed for robust power transmission applications, offering reliable performance in demanding industrial environments. Its double configuration provides increased load capacity and ensures smoother, more consistent chain engagement. Built for durability, this component is suitable for a wide range of mechanical systems requiring efficient power transfer.

Technical Specifications

Sprocket Type

Double Type B

Model Number

D40B14

Key Applications

Power Transmission, Industrial Machinery, Mechanical Systems
