

Down-the-Hole Hammer

This down-the-hole hammer is designed for efficient rock drilling. It features a durable construction and optimized internal design for reliable operation.

Product Overview

High-Performance Drilling Solution

This down-the-hole hammer is an advanced drilling tool engineered for the mining and drilling industries to provide high penetration rates. Designed with a specialized inner structure, it maximizes energy transfer to the drill bit while maintaining low air consumption. Constructed from high-quality alloy steel, the tool offers smooth performance, durability, and a long service life in demanding rock drilling environments.

Technical Specifications

Size Range	90mm - 605mm
DTH Hammer Size	3" - 12"
Pressure Options	Low Pressure, High Pressure

Operational Features

Key Operational Benefits

- Fast drilling speed with low air consumption
- High-quality alloy steel construction
- Simple, reliable inner structure for easy maintenance
- Multihead thread connecting chuck for easy bit departure
- Interchangeable with standard DTH bits and drill pipes

Logistics

Production Capacity

2000 pcs
Monthly Productivity

Packaging	Wooden case
