

Downtube Bicycle Shifters

These shifters mount on a bicycle's downtube. They provide indexed shifting for accurate gear changes and durable performance.

Product Overview

Classic Downtube Shifting Performance

These downtube bicycle shifters are engineered for cyclists who value the tactile precision and reliability of traditional frame-mounted shifting. Designed for seamless integration onto the bicycle downtube, they offer a robust mechanism that ensures consistent performance across various terrains. With indexed shifting capabilities, these components provide the accuracy needed for smooth gear transitions, making them an ideal choice for restoration projects or custom bicycle builds.
