Overview

Comprehensive Dredging and Landfill Solutions

We provide industry-leading earthmoving services specializing in large-scale dredging and land reclamation projects. Our capabilities include developing deep-water harbors, constructing container storage platforms, and building essential maritime infrastructure like breakwaters and dikes. By reclaiming land from the sea, we create high-value constructible sites for diverse industrial and commercial developments globally.

Core Capabilities

Primary Services

- Dredging and landfill for deep water harbors
- Construction of container storage platforms
- Building of breakwaters and dikes
- Land reclamation for constructible sites

Equipment & Assets

Machine Fleet

1800 Units

Specialized Machines

Asset Status

First-Grade Asset • Full Maintenance Capacity

Global Operations

International Deployment

Ability to dispatch specialized technicians and workers for developments outside of domestic markets.

Project Scope

Sector Expertise

Earthmoving, Dredging, Reclamation, Maritime Infrastructure
