

Drifting Skateboard Components

These components are essential for building or repairing drifting skateboards. They provide stability and maneuverability for riders.

Product Overview

High-Performance Drifting Skateboard Components

These drifting skateboard components are engineered for riders seeking a blend of stability and maneuverability. Featuring a durable black plastic base integrated with robust metal latching mechanisms, these parts ensure long-lasting performance. The unique slotted top surface design is available in multiple colors to provide enhanced grip and superior control during use.

Design & Aesthetics

Available Colors

Green • Yellow • Blue

Technical Construction

Base Material	Durable black plastic
Latching System	Integrated metal latching mechanisms

Performance Features

Key Benefits

- Enhanced grip and control
- Improved rider stability
- High maneuverability
- Essential for building or repairing drifting skateboards

Surface Design	Unique slotted design
----------------	-----------------------

Usage

Primary Application	Drifting skateboarding
