

Drill Bit for Petrochemical Applications

This drill bit is designed for demanding applications in petrochemical and petroleum prospecting engineering. It features a robust construction with a specialized flute design for efficient material removal and reduced vibration.

Product Overview

High-Performance Drilling Solution

The FD-A01 is a high-performance drill bit specifically engineered for the demanding requirements of petrochemical and petroleum prospecting engineering. Its robust construction and specialized flute design facilitate efficient material removal while significantly reducing vibration during operation. This tool is designed for extended service life and precision drilling in tough materials, ensuring reliability in the most challenging environments.

Technical Specifications

Primary Application

Petrochemical • Petroleum Prospecting

Model Number

FD-A01

Performance Features

Key Performance Features

- Specialized flute design for efficient chip removal
- Vibration reduction technology
- Engineered for extended tool life
- Precision drilling in tough materials

Operational Benefits

High-Performance, Robust Construction, Reliable, Precision
