

Drilling and Tapping Machine

This drilling and tapping machine is designed for precision machining operations. It features a robust construction, advanced CNC control system, and high-speed spindle for efficient material removal.

Overview

High-Performance Drilling and Tapping Solution

This drilling and tapping machine is designed for precision machining operations requiring high speed and accuracy. It features a robust construction suitable for professional manufacturing environments. With an advanced CNC control system and high-speed spindle capabilities, it ensures efficient material removal for a variety of industrial components.

Performance Metrics

Spindle Speed

12000 rpm

Spindle Speed

Machine Specifications

Model Identifier	T-7
Machine Type	Drilling, Tapping, CNC

Features

Operational Features

- Robust construction for durability
- Advanced CNC control system
- Multi-tool changer for versatility
- High-speed spindle for efficient material removal
