

Drum Brake Shoe

These brake shoes are designed for use in drum brake systems. They provide stopping power through friction when pressed against the rotating drum.

Product Overview

High-Performance Drum Brake Shoes

These drum brake shoes are engineered for reliable stopping power in demanding automotive environments. Featuring high-quality friction material securely bonded to a robust, curved metal backing, they ensure consistent performance and durability. Designed for seamless integration into standard drum brake systems, these shoes provide the necessary friction to safely decelerate rotating drums.

Technical Specifications

Part Number	8106-410-PLUS-FF
Component Type	Drum Brake Shoe
Key Features	Bonded Friction Material, Curved Metal Backing, Standard Mounting Holes, Durable Construction
