

Dry Polishing Pad for Stone

This polishing pad is designed for dry use on marble and granite. It delivers high-quality results, good flexibility, and an excellent finish without needing water as a coolant.

Overview

High-Performance Dry Polishing Pads

These professional-grade dry polishing pads are specifically engineered for stone surface finishing without the need for water. Featuring a distinctive honeycomb pattern, they ensure efficient material removal while maintaining a consistent, smooth polish across various stone types. The range includes multiple grit levels from coarse shaping to final high-gloss buffing, making them a versatile solution for stone fabrication and restoration.
