

Dual-Chamber Refining System with Recirculating Fluid System

This refining system features a dual-chamber design with individual hoods and spray nozzles. It is equipped with a control panel, gauges, digital displays, a pump, and a reservoir system.

System Overview

Dual-Chamber Refining System

This advanced dual-chamber refining system is designed for high-precision laboratory or industrial processing. Equipped with individual hoods and spray nozzles, it ensures thorough cleaning and treatment of components. The integrated recirculating fluid system and comprehensive control panel provide operators with accurate command over the refining process.

Design Configuration

Dual-Chamber, Recirculating Fluid System, Mobile Base

Technical Features

Process Control Interface

- Multi-gauge pressure monitoring
- Digital process displays
- Precision manual adjustment knobs

Mobility

Yes
