

Dual Channel UHF Wireless Microphone System

This UHF wireless microphone system provides clear and reliable audio transmission. It includes a dual-channel receiver and two handheld microphones suitable for various professional audio applications.

Overview

Professional Wireless Audio Solution

The Dual Channel UHF Wireless Microphone System is a high-performance audio solution designed for clear and reliable wireless transmission in demanding environments. Featuring a dual-channel receiver with independent volume controls and dynamic handheld microphones, it ensures stable signal connectivity for stage performances, public speaking, and presentations. This professional-grade system operates within the 600-870MHz range, providing a wireless service reach of up to 80 meters.

System Performance

Frequency Range	600-870MHz
Wireless Service Range	80 m
S/N Ratio	80 dB
Modulation Mode	FM

Receiver Specifications

Display Type	LCD
Power Specification	DC 12V
Housing Material	Plastic
Channel Configuration	2

Transmitter Specifications

RF Output Power

10 mW

RF Output Power

Microphone Type	Dynamic
Battery Requirements	3V (1.5V x 2)
