

# Dual-Channel UHF Wireless Microphone System

This is a dual-channel wireless microphone system with a wide frequency range. It ensures clear and reliable audio transmission with its low distortion and high signal-to-noise ratio.

## Product Overview

### Professional Wireless Audio Performance

This dual-channel UHF wireless microphone system is engineered for professional audio applications, delivering clear and reliable sound transmission. The system includes a robust receiver unit paired with two handheld microphones operating on separate UHF channels to effectively minimize interference. Designed for versatility, it is an ideal solution for live performances, public presentations, and recording studio environments.

## Technical Specifications

### Operating Frequencies

**614.15 MHz**

Channel A

**750.45 MHz**

Channel B

### Control Interface

- Digital frequency display
- Adjustable gain controls per channel

### Best For

Live Performance • Presentations • Recording Studios

### System Type

Dual-Channel UHF Wireless

### Key Features

UHF, Dual-Channel, Low Distortion, High Signal-to-Noise Ratio
