

Dual-Channel VHF Wireless Microphone System

This VHF wireless microphone system operates in the 210-270MHz frequency range. It features dual-channel operation and handheld dynamic microphones.

Product Overview

Professional Wireless Audio

This dual-channel VHF wireless microphone system is designed for high-performance audio applications including presentations, live performances, and public address systems. It provides reliable and clear signal transmission with simultaneous dual-channel operation. Built for professional use, the system ensures consistent audio quality across a wide frequency response range.
