

Dual-Channel VHF Wireless Microphone System

This dual-channel VHF wireless microphone system is designed for professional audio applications. It features audio compress and compounding technology to reduce noise interference and increase dynamic range.

Overview

Professional Dual-Channel VHF Wireless System

This dual-channel VHF wireless microphone system is engineered for reliable audio performance in presentations, performances, and public address environments. It utilizes multistage narrow-band high and medium frequency filtering alongside advanced audio compress and compounding technology to ensure a large dynamic range with minimal noise interference. Featuring a robust metal receiver and quartz crystal oscillating circuitry, this system provides consistent frequency stability for professional-grade audio output.

Performance Metrics

Frequency Response

40 Hz

Minimum Frequency

20 KHz

Maximum Frequency

Frequency Range	220-270MHz
-----------------	------------

Dynamic Range	90 dB
---------------	-------

Technical Specifications

Modulation Mode	FM
-----------------	----

Frequency Stability	5 KHz
---------------------	-------

Operating Distance	60 m
--------------------	------

Connectivity and Power

AF Output Level	500 mV
-----------------	--------

Receiver Power Input	AC220V-240V, 50/60Hz
----------------------	----------------------

Microphone Power Source	2 x AA 1.5V batteries
-------------------------	-----------------------

Physical Characteristics

Build Materials	Metal Receiver, Plastic Handheld
-----------------	----------------------------------
