

Dual-Core Heat Pump Water Heater System

This dual-core system efficiently heats water using heat pump technology. It includes both an outdoor unit and an indoor unit with a decorative floral pattern.

Overview

High-Efficiency Dual-Core Heat Pump System

This advanced heat pump water heater system combines compact design with intelligent storage technology to deliver rapid, consistent hot water. Engineered for energy efficiency, it provides up to four times the heating performance compared to traditional units, ensuring significant electricity savings. With a focus on safety, the system features complete water and electricity separation, making it a reliable and worry-free solution for residential hot water needs.

Performance Specifications

Heating Efficiency

4 x

Energy Savings Factor

Tank Capacity	150 L
Hot Water Output	180 L

Features

Key Features

- Constant temperature central water supply
- Ultra-low temperature operation
- Intelligent manipulation controls
- Fast heating speed
- Water and electricity separation for safety

Safety Standards	Water/Electricity Separation, Safe Operation
