

# Dual-Direction Square Duct Fan for Ventilation Systems

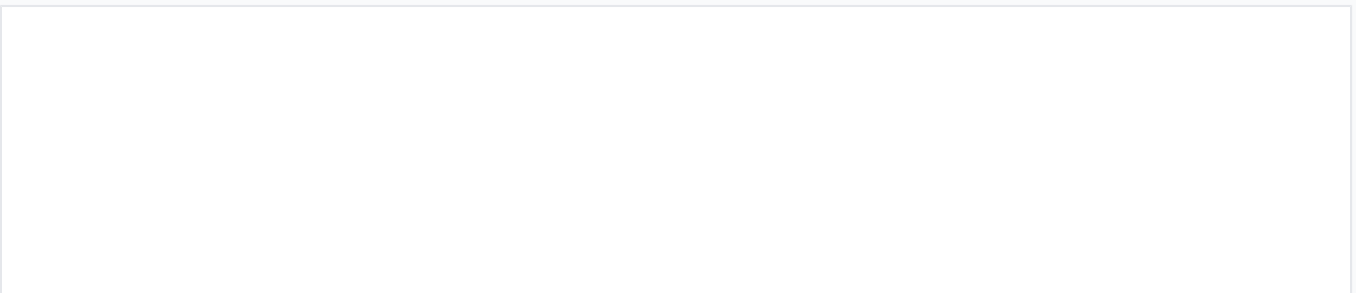

This square duct fan is designed for dual-direction airflow within ventilation systems. It is constructed with durable materials, ensuring efficient air circulation and optimal air quality and temperature control.

## ADDITIONAL IMAGES

## Product Overview

Visual representation of the two-way fresh air switching mechanism.

## Dual-Direction Ventilation Performance

This dual-direction square duct fan is engineered for versatile airflow management in modern ventilation systems. Designed to facilitate efficient air circulation in both supply and exhaust configurations, it offers optimal performance for residential, commercial, and industrial settings. The robust square housing ensures seamless integration into rectangular ductwork, providing a secure and airtight fit for reliable, long-term environmental control.

## Technical Features

### Ideal Applications

- Residential Ventilation
- Commercial Air Systems
- Industrial Ductwork

### Airflow Mode

Dual-Direction, Supply, Exhaust

### System Integration

Yes
