

Dual Induction and Infrared Cooktop

This dual cooktop combines the benefits of induction and infrared cooking in one appliance. It offers precise temperature control and compatibility with various cookware materials.

Product Overview

Dual-Function Versatility

The QC328 is a professional-grade kitchen appliance that seamlessly combines an induction cooker with an infrared stove in a single unit. This dual-function design provides superior culinary flexibility, allowing users to utilize electromagnetic induction for rapid, precise heating alongside infrared radiation for compatibility with a wider variety of cookware materials. Engineered for modern professional environments, the unit features a sleek ceramic glass surface and intuitive touch-sensitive controls for each cooking zone.
