

# Dual-Port Cable Connector Assembly

This dual-port cable connector assembly is designed for connecting cables or tubes in fluid or gas transfer systems. It features two cylindrical ports with ribbed ends for secure hose or tube attachment.

## Product Overview

### Dual-Port Connector Assembly

The dual-port cable connector assembly is engineered for reliable fluid or gas transfer in demanding industrial environments. Featuring a robust, corrosion-resistant polymer construction, it provides a durable solution for connecting dual lines securely. The ribbed connector design ensures a tight, leak-proof seal, making it an ideal choice for technical applications requiring long-term performance and reliability.

## Technical Specifications

Connector Configuration	Dual-Port
Interface Style	Ribbed ends for secure hose attachment
Material Characteristics	Corrosion Resistant, Chemical Resistant, Polymer

## Design and Mounting

### Mounting Options

- Integrated central support structure
- Vertical alignment rod included
