

Dual Power Lighting and Water Pump Control Box

This control box is designed for lighting and water pump control, featuring dual power capability and button-based operation. The enclosure uses high-strength, corrosion-resistant cold-rolled electrolytic plate, with removable upper and lower sealing plates for flexible wiring.

Product Overview

Industrial Power Management Solution

This dual power lighting and water pump control box is engineered for reliable power distribution in demanding environments. It is widely utilized in industrial and mining enterprises, high-rise buildings, hospitals, and large-scale public facilities. The unit features a robust enclosure and intuitive button-based control interface, ensuring safe and efficient operation for essential infrastructure.

Technical Specifications

Core Functions

- Dual power capability
- Lighting control
- Water pump control
- Button-based interface

Construction

Robust Enclosure • Industrial Grade • Low Voltage

Model Series

XL-21

Primary Applications

Industrial, Mining, High-rise Buildings, Hospitals, Public Facilities
