

Dual RG59 Coaxial Cable

This dual RG59 coaxial cable has a copper center conductor and foam polyethylene dielectric insulation. It also features a braided shield and a durable black PVC jacket, making it suitable for video and data transmission applications requiring dual cable runs.

Product Overview

Dual RG59 Coaxial Cable

This Dual RG59 Coaxial Cable is engineered for reliable signal transmission in professional video and data applications. Featuring a high-quality copper center conductor and foam polyethylene dielectric insulation, it ensures stable performance over distance. The durable black PVC jacket and robust braided shield provide excellent protection against physical damage and signal interference, making it an ideal choice for dual-run installations.

Technical Construction

Jacket Color

Black

Conductor Material

Copper

Dielectric Insulation

Foam Polyethylene

Shielding

Braided Shield

Jacket Material

PVC

Applications

Typical Applications

- Video transmission
- Data transmission
- Dual cable runs
