

Dual Stage Vacuum Pump

This vacuum pump is designed for efficient, reliable, and low-noise operation. It is suitable for applications in refrigeration, medicine, chemical processing, and metallurgy industries.

Overview

Professional Dual-Stage Vacuum Pump

This dual-stage vacuum pump is engineered for high-performance evacuation in refrigeration, HVAC, and industrial applications. Its robust design ensures reliable, low-noise operation even during demanding tasks like system servicing and installation. With a deep vacuum capability, this unit provides the essential efficiency required for maintaining complex mechanical systems.

Technical Specifications

Key Performance Metrics

8 CFM

Free Air Displacement

15 MICRONS

Ultimate Vacuum

0.5 HP

Motor Power

Operational Data

Parameter	Specification
Model	VPC-4D
Voltage	220V/50Hz
Inlet Port	1/4SAE & 3/8SAE
Oil Capacity	250ML

Applications

Target Industries

Refrigeration, Medicine, Chemical, Electronics, Metallurgy, HVAC

Features

Key Features

- Dual-stage design for deeper vacuum levels
- Low noise operation
- Built-in oil viewing window
- Easily accessible ports for maintenance
- Robust construction for durability
