Product Overview

Ductile Iron Flanged Tee

These ductile iron flanged tee pipe fittings are engineered to meet rigorous international standards, including EN545, EN598, and ISO2531. Designed for versatility and reliability, they are suitable for both underground and above-ground installations in potable water, sewage, and drainage systems. With a comprehensive size range from DN50 to DN2000, these fittings provide durable, leak-proof connections for demanding infrastructure projects.

Technical Standards

Applications

Potable Water • Sewage Systems • Drainage

Compliance Standards

EN545, EN598, ISO2531

Available Size Range

DN50 - DN2000

Product Specifications

7AW/L

High-quality ductile iron fitting designed for secure flanged connections.

7AW/L

Ductile iron tee fitting, built for robust performance in water and wastewater infrastructure.

Installation

- Underground
- Above-ground

Material

Ductile Iron

Connection Type

Flanged
