

Ductile Iron Pipe Fittings

Ductile iron pipe fittings are engineered for high strength and durability in demanding environments. The product range includes elbows, tees, flanges, and straight pipes designed for water, sewage, and industrial fluid transport.

Product Overview

Robust Ductile Iron Solutions

These ductile iron pipe fittings are engineered for high strength and durability, providing reliable performance in demanding infrastructure environments. Designed for efficiency, they ensure secure and leak-proof connections across water distribution, sewage, and industrial fluid transport systems. Their superior resistance to corrosion and erosion guarantees long-term reliability and reduced maintenance costs for critical piping networks.

Technical Specifications

Size Range	DN50 — DN1000
Material Standards	ASTM A536, BS2798
Compliance Standards	EN545, BS4772, ISO2531

Key Features

Applications

- Water Distribution
- Sewage Systems
- Industrial Pipelines
- Gas Conveyance

Performance Highlights

1000 DN

Max Nominal Diameter

50 DN

Min Nominal Diameter
