

Ductile Iron Pipe for HDD Installation

Engineered for horizontal directional drilling, these ductile iron pipes withstand stresses associated with trenchless construction. The robust pipes are coated for corrosion prevention in underground environments, making them suitable for municipal water supply projects.

Product Overview

High-Performance Ductile Iron Piping

Engineered specifically for Horizontal Directional Drilling (HDD) installations, these ductile iron pipes are designed to withstand the high-stress demands of trenchless construction methods. Featuring robust construction and advanced anti-corrosion coatings, they provide long-term reliability for municipal water supply and water processing projects. These pipes are built to endure harsh underground environments while maintaining structural integrity.

Technical Specifications

Available Lengths

- 6 meters
- 8.15 meters

Diameter Range (DN)

DN80 - DN2600mm

Standards & Certifications

ISO 9001, ISO 14001, GB/T 28001, AKWASA/KWSP-CGC

Performance Metrics

Annual Production Capacity

38000 km

Pipeline Capacity

Global Reach

120 Countries
