

Ductile Iron Pipe for Horizontal Directional Drilling

Ductile iron pipes are installed using horizontal directional drilling (HDD) for water processing projects. This trenchless method is suitable for sensitive areas, providing high strength and corrosion resistance for reliable water transport.

Product Overview

Ductile Iron Pipe for Trenchless Installation

Engineered for horizontal directional drilling (HDD), these ductile iron pipes offer a robust solution for water infrastructure projects that require minimal surface disruption. Designed for durability and corrosion resistance, this piping system is ideal for crossing obstacles such as rivers, roads, and railways. The system provides a sustainable, high-strength alternative for long-distance water transport in environmentally sensitive areas.

Technical Specifications

Available Lengths

- 6 meters
- 8.15 meters

Annual Production Capacity

38000 km

Annual Capacity

Diameter Range

DN80 to DN2600mm

Compliance & Quality

Management Systems

Occupational Health & Safety • Environmental Management • Quality Management

Quality Certifications

ISO 9001, ISO 14001, GB/T 28001, BV Certified, KS Certified
