

Ductile Iron Pipe for Water Supply

Ductile iron pipe designed for water supply applications. Features a large diameter for efficient water conveyance in municipal and industrial systems.

Product Overview

Industrial Ductile Iron Water Pipes

These high-performance centrifugal ductile iron pipes are engineered for large-scale municipal water supply systems and infrastructure projects. Designed for durability and versatility, the pipes are available in a wide range of diameters from DN80 to DN2600mm to accommodate various flow requirements. The product features advanced coating technology and superior technical strength, ensuring reliability in complex environmental conditions.

Technical Specifications

Standard Pipe Lengths

- 6 meters
- 8.15 meters

Nominal Diameter (DN)

DN80 - DN2600mm

Performance Metrics

Annual Production Capacity

38000 km

Annual Capacity

Certifications

Quality & Management Systems

ISO9001, ISO14001, GB/T28001, BV Certified, KS Certified
