

Ductile Iron Pipes for Water Supply

These ductile iron pipes are designed for municipal water supply engineering. The robust pipes ensure reliable water distribution with superior strength and corrosion resistance.

Product Overview

High-Performance Ductile Iron Infrastructure

These centrifugal ductile iron pipes are engineered for robust municipal water supply systems, offering exceptional strength and long-term durability. Available in a wide range of diameters from DN80 to DN2600mm, they are suitable for large-scale infrastructure projects requiring reliable fluid transport. The product line adheres to rigorous international quality standards, ensuring consistent performance across diverse global applications.

Technical Specifications

Diameter Range

80 mm

Minimum DN

2600 mm

Maximum DN

Available Lengths

- 6 meters
- 8.15 meters

Manufacturing Process

Centrifugal casting

Quality & Compliance

Quality Compliance

Occupational Health & Safety Certified • Environmental Management Certified • Quality Management Certified

Certifications

ISO 9001, ISO 14001, GB/T 28001, French BV, Korea KS

Market Presence

Global Reach

120 countries

Annual Production Capacity

38000 km
