

Ductile Iron Pipes for Water Transportation

Ductile iron pipes designed for use in water processing and distribution. These pipes are suitable for installation in new pipeline systems.

Product Overview

High-Performance Water Infrastructure

These centrifugal ductile iron pipes are engineered for large-scale water transportation and distribution projects. With a robust design, they offer industry-leading durability and are manufactured in sizes ranging from DN80 to DN2600. Their international adoption across 120 countries confirms their reliability in diverse environmental and industrial conditions.

Technical Specifications

Available Pipe Lengths

- 6 meters
- 8.15 meters

Annual Production Capacity

38000 km

Pipeline Length

Nominal Diameter Range

DN80 - DN2600mm

Compliance and Quality

Industry Standing

Global Export to 120+ Countries • 45% Domestic Market Share

Quality & Management Standards

ISO 9001, ISO 14001, GB/T 28001, BV Certified, KS Certified
