

Ductile Iron Pipes with Flange Connections

Ductile iron pipes designed for water processing engineering projects. These pipes feature bolted flange connections and a specialized T-joint with an access port for efficient water distribution and maintenance.

Product Overview

High-Performance Centrifugal Ductile Iron Pipes

These ductile iron pipes are engineered for large-scale water infrastructure, offering exceptional durability and reliability. Featuring standardized flange connections and robust construction, they are designed to withstand demanding environmental conditions in water processing and distribution systems. Manufactured using advanced centrifugal processes, these pipes ensure consistent quality and performance for long-term project viability.

Technical Specifications

Available Lengths

- 6 meters
- 8.15 meters

Nominal Diameter (DN)	DN80 - DN2600
Connection Method	Bolted Flange Connections

Quality & Standards

Compliance Certifications	ISO 9001, ISO 14001, GB/T 28001, BV Certified, KS Certified
---------------------------	---

Performance Metrics

Annual Production Capacity

38000 km

Annual Production Capacity
