

# Ductless Concealed Air Conditioner

This air conditioner is a ductless unit designed for concealed installation. It features a metallic chassis, internal coil system, and refrigerant line connection for efficient cooling and heating.

## Product Overview

### Efficient Concealed Climate Control

This ductless concealed air conditioner is engineered for discreet installation within ceiling or wall cavities, making it an ideal choice for modern architectural projects. The unit features a robust metallic chassis and an advanced internal coil system designed for high-efficiency cooling and heating. Its compact design ensures it provides powerful climate control without compromising the aesthetic integrity of the interior space.

## Design & Construction

### Unit Type

Ductless • Concealed • Ceiling/Wall Integrated

### Chassis Material

Metallic

## Technical Features

### Core Components

- Internal coil system
- Refrigerant line connection points
- Compact metallic housing

### Installation Options

Ceiling Cavity, Wall Cavity, Discreet Integration
