

DVB-C Cable Receiver with DVD Playback

This high-definition digital video broadcasting cable receiver allows for DVD playback. It supports DVB-C standards for receiving cable television signals.

Overview

Versatile Digital Entertainment Hub

The model 2220 is a dual-function device designed to integrate high-definition cable television reception with DVD playback capabilities. It supports standard DVB-C cable signals, ensuring compatibility with digital broadcast networks. Additionally, the inclusion of a Common Interface (CA) slot allows for the integration of conditional access modules, providing flexibility for subscription-based content services.
