

DVB-S2 Digital Satellite Receiver

This satellite receiver is designed for digital television reception. It features USB 2.0 connectivity, a digital display, and supports DVB standards.

Overview

High-Performance Digital Satellite Reception

This DVB-S2 digital satellite receiver is engineered to provide a seamless high-definition viewing experience with support for 1080p resolution. It features a robust hardware architecture, including a SUNPLUS 1502 processor and 256MB of SDRAM, ensuring smooth operation and fast channel switching. With extensive connectivity options like USB 2.0, HDMI 1.3, and integrated Wi-Fi, it serves as a versatile multimedia hub for home entertainment.

Core Hardware

Processor	SUNPLUS 1502
SDRAM Memory	256 MB
