Overview

PACKING AND DELIVERY

Professional packaging ensures the device is protected during transit and delivery.

Professional Satellite Alignment Tool

This digital satellite finder is a precision instrument designed for the accurate alignment and optimization of satellite dish antennas. Supporting both DVB-S and DVB-S2 standards, it ensures compatibility with a wide range of satellite signals. The device features an integrated LCD display with backlight, an adjustable buzzer for audible signal feedback, and a built-in compass to assist in directional positioning, making it an essential tool for field installations and maintenance.

Technical Specifications

Operating Voltage

12 V

Min Voltage

20 V

Max Voltage

Supported Control Signals

- 0/22KHz
- 13/18V

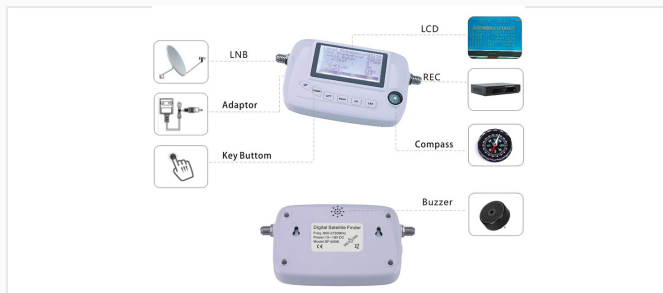

Supported Standards

DVB-S, DVB-S2

Frequency Range

950-2150 MHz

Features

Device layout showing the LCD screen, navigation buttons, and connection ports.

The device meets international safety and quality standards, including CE certification.

Display & Interface

- LCD display
- Built-in backlight
- Signal buzzer
- Integrated compass
- Multi-button navigation (Up, Down, Left, Right, OK, Menu)

Compliance

CE Certified
