

DVB-S/T Combo Receiver

This digital video broadcasting receiver supports both satellite (DVB-S) and terrestrial (DVB-T) signals. It features multi-standard demodulation, high-performance error correction, and a range of connectivity options for seamless integration with various display devices and peripherals.

Product Overview

High-Performance DVB-S/T Combo Receiver

This digital video broadcasting receiver is engineered to support both satellite (DVB-S) and terrestrial (DVB-T) signal reception. It features advanced multi-standard demodulation and high-performance error correction to ensure reliable signal quality. Designed for seamless integration, the unit offers versatile connectivity options for various display devices and peripherals, making it an ideal choice for efficient digital television broadcast reception.

Technical Specifications

Key Features

- Multi-standard demodulation
- High-performance error correction
- Versatile connectivity options

Supported Standards	DVB-S, DVB-T
Model Identifier	5000
