

DVB-T/S Digital Combo Receiver

This digital combo receiver is designed to receive both terrestrial and satellite television signals. Supporting DVB-T and DVB-S standards, it provides access to a wide array of channels.

Overview

Versatile Digital Combo Receiver

The TS2006 is a high-performance digital combo receiver designed to seamlessly integrate both DVB-T and DVB-S terrestrial and satellite signals. It offers full compatibility with MPEG-2 standards, ensuring reliable signal reception and high-quality playback. With support for up to 5000 total programs and 100 satellites, this device is built to handle extensive channel lineups for a comprehensive viewing experience.
