

Dyneema Round Sling

These high-strength, lightweight round slings are made from Dyneema fiber. Their endless loop design allows for versatile rigging and even load distribution.

Overview

High-Performance Dyneema Round Slings

These high-strength, lightweight round slings are engineered from Dyneema fiber to provide an exceptional strength-to-weight ratio for heavy lifting. The endless loop design ensures versatile rigging options and even load distribution across various configurations. Equipped with a protective cover, these slings offer superior cut and abrasion resistance, making them ideal for demanding industrial and construction environments.

Key Performance

Key Performance Metrics

1 High

Strength-to-Weight Ratio

100 Dyneema

Fiber Type

Technical Features

Material Composition

- High-strength Dyneema core fiber
- Durable protective outer cover
- Endless loop construction

Application & Versatility

Recommended Industries

Construction • Rigging • Industrial Lifting

Lifting Configurations

Vertical Hitch, Choker Hitch, Basket Hitch

Safety & Durability

Resistance Properties

- Superior cut resistance
- High abrasion resistance
- Protective cover for core fiber safety

Design Benefits

Endless loop design allows for even load distribution and multiple rigging points.
