

Earth Leakage Circuit Breaker ELCB

This earth leakage circuit breaker is a safety device that protects against electrical shock by detecting leakage currents. It is used in residential, commercial, and industrial electrical systems to prevent accidents and equipment damage.

Product Overview

Safety and Protection

The ELCB is a critical safety device engineered to protect electrical systems and personnel from electrical shock hazards. By continuously monitoring for earth leakage currents, it ensures rapid power disconnection during fault conditions. Designed for versatility, this circuit breaker is suitable for a wide range of residential, commercial, and industrial electrical installations.

Technical Specifications

Key Features

- Robust construction
- Reliable tripping mechanism
- Earth leakage detection
- Rapid power disconnection

Configuration Options

Various Current Ratings • Multiple Pole Configurations

Device Type	Earth Leakage Circuit Breaker (ELCB)
Application Areas	Residential, Commercial, Industrial
